PROFESSIONAL EXPERIENCE

Software Engineer III | Google, Seattle, WA | *September 2024 – Present*

- Designed & led implementation and launch on CMEKv2, a multi-year architectural migration which enables metadata-only key rotation for Customer Managed Encryption Keys, hardens security through Crypto-Enforced-Auth, and reduces read and write latency by 7% for new objects in Cloud Storage
- Set technical direction & acted as team-lead for 1 engineer, mentoring them into a key contributor for CMEKv2

Software Engineer II (Fullstack) | Amazon, Seattle, WA | *December 2023 – August 2024*

- Architected and built a service that allowed Amazon to centralize management of final written warning and termination appeals and scale to a 10x increase in the number of HR employees and a 100x increase in supported appellant employees, working directly with end users to formalize requirements and directly managing 3 engineers

Software Engineer II (Fullstack) | Qualtrics, Seattle, WA | *May 2021 – December 2023*

- Designed, built, and maintain internal toolchains for Resiliency and Isolation testing, including dependency detection, fault-injection, and just-in-time UDP/TCP traffic mocking, which provides quality controls for 1200 microservices handling Qualtrics' total traffic and saves upwards of \$1 million per year in external testing contracts
- Led a cross-team engineering effort to create a staging-wide test run management system in order to enable centralized, scheduled resiliency testing, horizontal scale testing, and real-time test results for in-house tools which saves developers an average of 10 minutes per run for over 400 tests run per quarter
- Designed and built an internal Homebrew CLI tool enabling local performance A/B testing and incident reproduction. Executed an engineering-wide gameday with this tool that identified 50 high priority action items for key systems
- Created an autonomous test execution platform leveraging internal Scale & Resiliency tools to provide continuous validations of service fault resiliency and scale limitations to prevent regressions and identify failure points
- Created teaching materials and presented eng-wide on scalable design, intelligent testing, and proprietary toolkits for 180 developers in order to improve tool adoption and inform impactful testing

Software Engineer Intern (Fullstack) | Qualtrics, Seattle, WA | *June 2020 – Sept 2020*

- Designed & implemented a robust, resilient, and highly performant isolation testing tool to enable safely load testing heavily interconnected systems
- Cooperated cross-team in order to capitalize on existing internal tools and promote early isolation testing adoption

Software Engineer & Data Analyst | VPGame Inc., Bellevue, WA | *June 2019 – Sept 2019*

- Created an end-to-end data pipeline to analyze & store customer data with high throughput to handle a multi-million daily active user count
- Implemented an autonomous social media manager, integrating with existing systems to cover the DOTA 2 tournament "The International 9"
- Architected a NoSQL to SQL database port with an online query and visualization system to enable data analytics

Player, Caster, Personnel Management | Rise eSports, Phoenix, AZ | *Oct 2015 – Mar 2018*

- Created promotional material for the founding of Rise eSports, including event casting
- Competed live on stage in the Cheesadelphia 4 and Cheesadelphia 6 *StarCraft II* tournaments
- Recruited, coached, and managed talent for the academy and professional rosters

EDUCATION

Bachelor of Science: Computer Science | University of Washington | *Sept 2017 – Mar 2021*

Interdisciplinary Honors Program and a specialization in Data Sciences

SKILLS AND PROJECTS

EmotiBoo (Back-End Server & API Integration): Application to supplement conversation via real-time sentiment analysis of facial expression and body language

- DubHacks 2018, winner of Accessibility Track

Languages: Java, Python, GoLang, C, C++, JavaScript, TypeScript, HTML, CSS

Tools & Frameworks: Flink, SQL, NoSQL, GCE, AWS, Docker, Jenkins, Consul, Nomad, Gremlin, AWS FIS, TensorFlow, Pandas, Artillery, ChaosToolKit & Pumba, Selenium, PyTorch, ElasticSearch, Qamel, React, Webpack, NodeJS, Terraform
